

Cable drum drive ZW-1.5

Hydraulic rewinding machine specially developed for drum carriers of the LTV-R series

- Fixed construction on the LTV-R series
- Compact hydro-unit with combustion engine
- Hydraulic transmission
- Easy, user friendly operation
- Drum drive by means of a single solid driving wheel, pressed against the drum flanges by a cylinder
- Connection of lifting cylinders of the drum carrier to the hydro unit
- Stepless speed control
- Two directions of rotation, i.e. for winding and unwinding
- Operational functions "rotation" and "speed" at the rear of the drum carrier to assure a clear view on the operation for the Operator
- CE- marking

Options :

- Blasting/metalizing
- Colour finishing according to client demands
